

## Quick Answers for Pool Owners

### What is ECOMatic and will it work for me?

ECOMatic is a proven, all-natural method of creating crystal clear water while destroying germs, viruses, and bacteria. The system has only two components: a power pack and a cell that quickly install on almost any new or existing pool filtration system. The process is quite simple. Add salt, then watch as the mildly salted water passes through the cell and is converted into chlorine that cleanses and purifies your water. It then reverts back to salt and the whole process is repeated. This method is as effective as using packaged chlorine and is completely safe for your family.

### Why change from packaged chlorine?

Hazardous packaged chlorine and other harsh chemicals can sting your eyes, irritate your skin, and taste bitter, not to mention what a hassle and danger it is to store. An ECOMatic pool is virtually 100% sanitized naturally and the water feels great. You can monitor its effectiveness with a normal pool test kit.

### Is it more economical than chlorine?

Expensive pool chlorine will be a thing of the past. The ECOMatic system recycles salt so the average pool may require as little as \$20 a year of new salt which is much easier and cheaper than chlorination.

### How will the water feel?

Since the water is only  $\frac{1}{3}$  as salty as human tears or  $\frac{1}{9}$  as salty as seawater, it's virtually undetectable to swimmers. You'll be amazed at how refreshing and invigorating the water actually feels and you'll never want to swim in a traditionally chlorinated pool again.

### What does it take to get started?

In most cases, the pool doesn't need to be drained. Just add salt and then turn the system on. Ask your pool professional for details or visit [ecomatic.com](http://ecomatic.com) for a dealer near you.

## Choose ECOMatic and trust the water chemistry experts

With more than 350,000 units installed worldwide, ECOMatic saltwater chlorinators are the crystal clear choice for water quality management. ECOMatic was developed in Australia in 1976, and today over 90% of pool owners there use salt systems to purify their pools. The revolutionary ECOMatic system transforms extremely mild salt water into a natural chlorine solution that purifies your water. The effects are immediate and the results are amazing.

### Eye-opening technology

ECOMatic in an inexpensive, automated control system with a self-cleaning, high flow electrolytic cell that comes with overload protection. It is easy to maintain and operate and features a compact, corrosion-proof aluminum and plastic enclosure.

The entire system consists of two small units, which can easily be attached to your pump/filtration equipment. Once the ECOMatic is installed, you just add common salt to

the water. The specified salt levels are only a fraction of those in seawater, so it won't irritate your eyes or skin and has no odor or salty taste. As the mildly salted water passes through the ECOMatic cell, it's converted into a natural sanitizer that cleanses and purifies the pool water, but without any of the irritating effects of traditional packaged chlorine.

The sanitizing agent then reverts back to salt, and the water will continually be maintained at a constant purity. It's free of chemical smells, chemical tastes and chemical irritation. Since it's only 1/3 as salty as tears, you'll hardly know there's salt in the water at all.

### Improve the quality of your water while cutting your expenses

No more running to the store every month for bottles of chlorine or shock treatments. Once ECOMatic is installed, your maintenance costs will drop. The system works automatically and requires no added run time for your equipment. A salt level indicator will let you know when you need to add more.

### Why salt?

- ▶ No more chlorine price increases
- ▶ No hassles or dangers of storing packaged chlorine
- ▶ No more eye and skin irritation
- ▶ No more unpleasant odors
- ▶ Naturally destroy germs, viruses, bacteria and chloramines
- ▶ Safe and eco-friendly
- ▶ Inexpensive and easy to operate

### Why ECOMatic?

- ▶ Easy to inspect and maintain
- ▶ Higher chlorine output
- ▶ Self-diagnostic display
- ▶ Self-cleaning cell via reverse polarity
- ▶ Cannot be over-salted
- ▶ Corrosion-proof power pack with aluminum heat sink
- ▶ 5-year limited warranty on cell and power pack
