

Finally a salt sanitizer
that monitors itself

balboadirect.com

ECOspa Sanitizer System

- Automatic sanitizer adjustment with advanced ORP monitoring and control
- Self-cleaning high-flow electrolytic cell
- Advanced electronic control with LED indicators
- Salt level and ORP indicators
- Most efficient and economical operating system

ECOspa was developed in Australia where over 90% of pool and spa owners use salt sanitizers. As mildly salted water passes through the electronic ECOspa cell, it's converted into a natural sanitizer that purifies your water.

ECOspa Options

Model	Cell Output
ECOspa	6 gm/hr

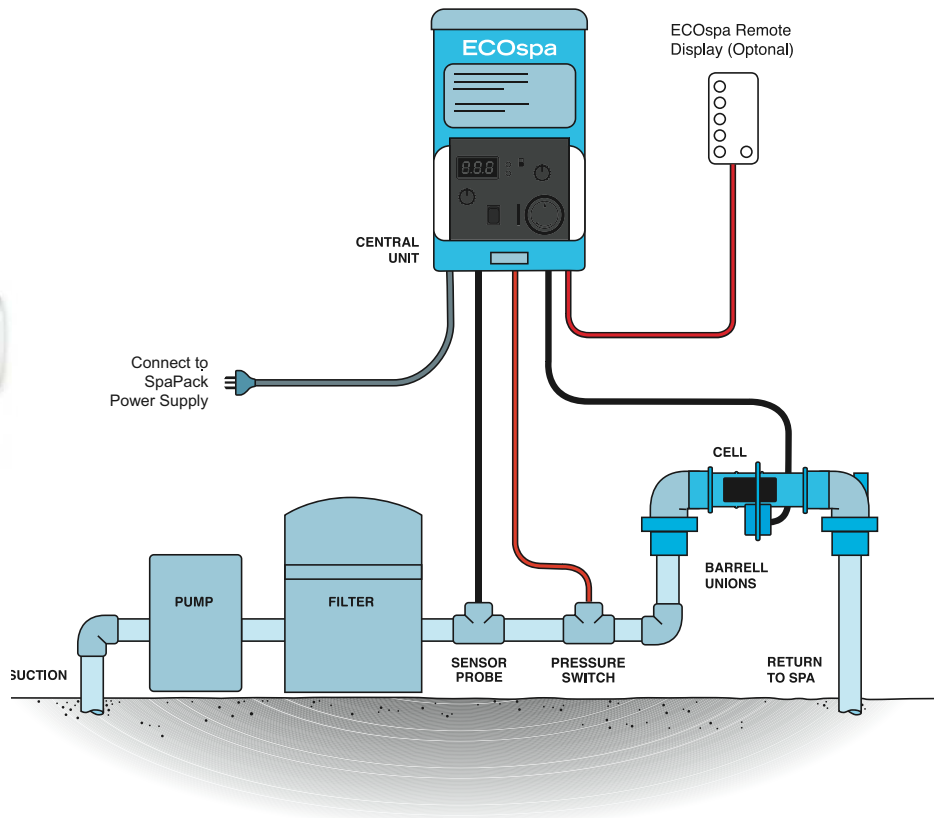

(available in 110v or 220v)

So automatic, it's virtually maintenance free.

Our ORP controlled power supply gives you the most reliable sanitizer levels with the most efficient power consumption – just 40 watts when running. The revolutionary ECOspa system temporarily transforms mildly salted water (one-tenth the salt concentration of sea water) into a natural chlorine solution that completely sanitizes your water. It's free of chemical smells, chemical tastes, and free of chemical irritation. Best of all, you'll have peace-of-mind with a nontoxic, bacteria free spa that's completely eco-friendly.

Key ECOspa advantages

- ▶ No handling or storing of chlorine or bromine
- ▶ Nonirritating to skin and eyes
- ▶ Environmentally friendly because salt is a natural product
- ▶ Optional remote display panel for use where power supply is not visible from spa
- ▶ Compact rust-free aluminum and UV resistant plastic enclosure
- ▶ Compatible with ozone
